

## Evaluation of both the Projects

### W Builders Program - Project Evaluation Report

#### Comparative Judgment

Criteria (Weight)	W-Access	W-Ocean
<b>Innovation &amp; Creativity (25%)</b>	5/10	3/10
	Smart contract wallets with social recovery & WNS - somewhat novel but exists elsewhere	Standard analytics dashboard - not innovative
<b>Technical Implementation (30%)</b>	4/10	2/10
	Has 4 smart contracts deployed, but has security flaws (incorrect address prediction, no reentrancy guard, custom ECDSA)	<b>No smart contracts at all</b> - purely frontend consuming APIs. Appears AI-generated via Lovable.dev, could use some custom dev effort
<b>Utility &amp; Impact (25%)</b>	3/10	4/10
	No ecosystem engagement, no social promotion, self-contained project with no W-Chain specific value, a network effect project cannot do without a network	Sergio engaged on socials promoting W-Chain, provides some user value for data visualization, mentions of usage from other users
<b>UX &amp; Design (10%)</b>	5/10	6/10
	Modern, functional UI with Tailwind/Radix components	Attractive ocean-themed design with good visualizations
<b>Completeness &amp; Presentation (10%)</b>	8/10	8/10
	Complete submission with demo & deck	Complete submission with demo & deck

## Final Weighted Scores

### W-Access

Criteria	Weight	Score	Weighted
Innovation & Creativity	25%	5/10	1.25
Technical Implementation	30%	4/10	1.20
Utility & Impact	25%	3/10	0.75
UX & Design	10%	5/10	0.50
Completeness	10%	8/10	0.80
<b>TOTAL</b>			<b>4.50/10</b>

### W-Ocean

Criteria	Weight	Score	Weighted
Innovation & Creativity	25%	3/10	0.75
Technical Implementation	30%	2/10	0.60
Utility & Impact	25%	4/10	1.00
UX & Design	10%	6/10	0.60
Completeness	10%	8/10	0.80
<b>TOTAL</b>			<b>3.75/10</b>

## Score Summary

Project	Score	Key Differentiator
W-Access (Manav)	4.50/10	Has actual smart contracts deployed on W-Chain, despite flaws
W- Ocean (Sergio)	3.75/10	Better community engagement, but no on-chain work

## Key Observations

### Why W-Access Scores Higher (Despite Issues):

- Actually deployed smart contracts on W-Chain (Testnet & Mainnet)
- Has on-chain and infrastructure
- Creates something new on the blockchain

## Why W-Ocean Falls Behind:

- **Zero smart contracts** - reads existing W-Chain data
- Could be turned off with no on-chain impact
- Appears to be heavily AI-generated via Lovable.dev
- But Sergio gets credit for social engagement

## Disqualification Justification

Both projects fail to meet the quality threshold expected for the W Builders Program prize pool (\$5,000 / \$3,000 / \$2,000):

Issue	W-Access	W- Ocean
No long-term ecosystem value	✓	✓
Technical concerns	Smart contract security flaws	No blockchain development
Originality concerns	Generic wallet pattern	Good idea, but needs more custom development
Ecosystem growth contribution	Zero social engagement	Some social activity

**Prize Approach:** Appropriate given both projects show effort and complete submissions, but neither deserves the full tiered prize structure.
